**World's First Point & Shoot High-Speed Camera Designed for Sports**

**San Diego, CA.** Fastec Imaging Corporation has announced the introduction of their new SportsCam high-speed digital video camera. The portable, hand-held, high-speed camera was exhibited at the American College of Sports Medicine Conference in Indianapolis, IN, in June.

The SportsCam is the world's first high-speed digital camera specifically designed for coaching, training, gait analysis, kinematics, physical therapy and biomechanics research. The SportsCam captures thousands of images at very high frame rates and then plays them back in slow-motion, so that coaches, trainers, athletes and researchers can immediately analyze performance.

In addition to instant playback on the built-in screen, Images can also be downloaded to a CompactFlash card or to a computer via USB-2.0.

The SportsCam records up to 500 frames per second to stop the action and, with its built-in battery pack, is ideal for both field and laboratory applications. The camera is available in both color and monochrome models.

The SportsCam is available worldwide through Fastec's international distributor organization.
